

Rubber Bump Stop 3/8" MNPT Thread

Part Number: P-M1014

Description: Designed to absorb impact and prevent damage, this softer, longer bump stop is used on car wash equipment like Rocker Brush arms, Tire Shine applicators, and Wrap brushes

Price: \$31.68

Detailed Description

The Rubber Bump Stop is an essential safety and protection component for a variety of equipment pieces within a car wash tunnel. This simple yet crucial part is strategically placed on equipment such as Rocker Brush arms, Tire Shine applicators, and Wrap brushes to prevent damage from the swinging motion of these assemblies.

Made from a tough, yet resilient rubber material, this bump stop is a newer, improved version that is both longer and softer than its predecessor. This design change allows it to more effectively absorb impact, providing a cushioned stop that prevents the equipment from making damaging contact with other wash components or, most importantly, the customer's vehicle.

The bump stop features a 3/8" male NPT thread, making it easy to install and replace on a variety of equipment. With a bump diameter of 2-1/4 inches and an overall bump length of 3 inches, it provides a substantial and visible point of contact. By stopping the equipment assembly before it reaches its maximum swing, the P-M1014 ensures safe operation and helps to significantly extend the lifespan of your valuable car wash machinery.

Specifications

- Product Type: Rubber Bump Stop
- Thread Type: 3/8" Male NPT
- Screw Length: 3/4"
- Bump Diameter: 2-1/4"
- Bump Length: 3"
- Material: Rubber
- Application: Rocker Brush arms, Tire Shine arms, Wrap brushes, and other swinging equipment.
