

1-1/2" Stainless Steel 2-Piece Clamping Collar

Part Number: P-M2194

Description:

Price: \$79.99

Detailed Description

This collar is used in the Drying Reverse Hugger system as well as the Reverse Hugger Side Washer system. It is a two-piece clamping collar designed to handle applications that require greater axial load capacity without marring the shaft. They offer a 360 degree clamping force so no part of the shaft is left without clamping pressure. These two-piece collars are made of stainless steel which are effective in corrosive environments such as the wash tunnel. The collars are designed to work on both hard and soft shafts. The design of the two-piece clamps allows for easier installation and maintenance than a one-piece clamp.

Specifications

- Inside Diameter: 1-1/2"
- Screw Hole Diameter: 1/4"
- Operating Temp. Range: -40F-800F
- Material: Stainless Steel
- Grade: 304
- Dimensions: 2-3/8" X 1/2"
