

# Loctite Anaerobic Flange Sealant Orange Paste 250 mL Tube

**Part Number:** P-SPL-2156

**Description:** Loctite 223856 Flange Sealant

**Price:** \$107.3

## Detailed Description

This sealant can be used on many different flanges in the wash tunnel including on the conveyor drive motors. The sealant is an anaerobic type sealant and part of the 574 series of Loctite sealants. It has an application harden time of 60 minutes and can be applied to aluminum and steel machined and rigid metal flange applications. It has a mild odor/scent with an acrylic base and comes out in an orange color. The sizing of the sealant tube is 250 mL and has a paste type viscosity. The full cure duration for this sealant is 24 hours.

## Specifications

- Harden Time: 60 Minutes
- Full Cure: 24 Hours
- Flash Point: 199.94F
- Tensile Strength: 725 PSI
- Shear Strength: 870 PSI
- Container Size: 250 mL Tube
- Specific Gravity: 1.159
- Max Operating Temp: 300F

## Instillation
